RHEL8.5 Supplement for Gen9 SPP Contents .................................................................................. 10
Overview

A Service Pack for ProLiant (SPP) Supplement is a bundle containing software and/or firmware components with SUM as the deployment tool. It may include support for a new operating system update or functionality that is not included in the SPP but works with the components in the SPP. The software and firmware included in the Supplement will provide support for functionality that is required outside a normal SPP release cycle. Supplements allow HPE to deliver support when it is needed so customers do not have to wait on a full SPP’s availability.

Each SPP Supplement’s version number will match the version of its corresponding SPP. Supplement Release Notes will be available and will include information on the components in the bundle. If the Supplement’s contents include Linux components, the components will also be available on the Linux Software Delivery Repository (SDR). Once released, the functionality of the SPP Supplement contents is included in the next available SPP.

Hot Fixes associated with an SPP may work with an SPP Supplement. Please review the Hot Fix to verify if it has support for the operating system that is supported in the Supplement. For more information on SPP Hot Fixes, please see the SPP Release Notes located on the SPP Information Library page.

This is the Red Hat Enterprise Linux (RHEL) 8.5 Supplement for Gen9 Service Pack for ProLiant 2021.10.0.

For more information on which servers are supported with RHEL 8.5, please visit our OS Support Site at: https://www.hpe.com/servers/ossupport.

Update recommendation

Optional - Users should update to this version if their system is affected by one of the documented fixes or if there is a desire to utilize any of the enhanced functionality provided by this version.

Alignment

Gen9 Service Pack for ProLiant 2021.10.0

Summary of Changes

Important Notes

When the terms, Supplement, Service Pack for ProLiant or SPP are used throughout this
document, they refer to all of the deliverables in the Table in the Overview Section unless explicitly stated.

⚠️ Before deploying any components to a system, be sure that a recent backup of the system is available in the event the deployment procedure fails.

**Release Summary**

The summary of this Red Hat Enterprise Linux (RHEL) 8.5 Supplement for Service Pack for ProLiant release is:

Added support for Red Hat Enterprise Linux 8.5

This Supplement corresponds with SPP 2021.10.0. Drivers either found in SPP 2021.10.0 or delivered with the RHEL 8.4 distribution can be used. However, the drivers found in the initial release (SPP 2021.10.0) may not contain all of the HPE value added features that are available in the Supplement. These features will be added in a future SPP release.

All components delivered in this Supplement to the Service Pack for ProLiant (SPP) are tested together and meet the dependencies of the other components in the Service Pack for ProLiant.

Systems using software and firmware components delivered with the following products should be able to easily migrate to the components in this supplement:

<table>
<thead>
<tr>
<th>Product</th>
<th>Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>Service Pack for ProLiant</td>
<td>2021.10.0</td>
</tr>
<tr>
<td></td>
<td>2021.05.0</td>
</tr>
<tr>
<td></td>
<td>2020.09.2</td>
</tr>
</tbody>
</table>

Note: The users may see the “thawing” state in the systemd message console because the systemd doesn’t set the default value correctly, especially after a restart or reload services.

**Prerequisites**

**Running SUM on Linux**

⚠️ Before deploying software updates on a target system, be sure that a recent backup of the target system is available in the event the deployment procedure fails.

To successfully deploy SUM on remote target systems based on a Linux operating system, the following must be available:

- libcrypt.so
- libcrypt.so.1
- /usr/lib/libqlsdm.so
- /usr/lib64/libqlsdm-x86_64.so
- /lib/cim/libqlsdm.so
The Supplement is designed for use after the operating system is installed. This enables the updating of drivers, and the installation of HPE utilities (such as Health and iLO drivers), and agents (Server, NIC, and Storage).

Using the SPP Supplement and its corresponding SPP on a supported Linux operating system. Enables the choice of either standard Linux installation tools (YUM/Zypper) or HPE management tools (SUM/OneView) to do the following:

- Use the software and firmware provided in the Supplement and the SPP.
- Use the firmware provided in the SPP and get the software from the Software Delivery Repository at https://downloads.linux.hpe.com/SDR.
- Use the firmware and software utilities provided in the SPP and get the drivers from the operating system distro.

When appropriate for any given deployment, components can be combined into a single ISO using SUM custom baseline or applied as separate packages.

To upload selected components to the iLO Repository and create an install set, select Save Components as an Install set on iLO Repository. SUM automatically creates a default name and description, but you can edit the name and description for the install set. You can use this install set to roll back the server components at a future time. The name and description are limited to 63 characters, and the only special characters allowed are - and _.
Component Release Notes

**Driver - Storage Controller**
HPE Dynamic Smart Array B140i SATA RAID Controller Driver for Red Hat Enterprise Linux 8 (64-bit)
Version: 1.2.10-200 (Recommended)
Filename: kmod-hpsa-1.2.10-200.rhel8u4.x86_64.compsig; kmod-hpsa-1.2.10-200.rhel8u4.x86_64.rpm; kmod-hpsa-1.2.10-200.rhel8u5.x86_64.compsig; kmod-hpsa-1.2.10-200.rhel8u5.x86_64.rpm

**Enhancements**

Adding RHEL8.5 support

**Driver - Storage Controller**
HPE ProLiant Smart Array Controller (64-bit) Driver for Red Hat Enterprise Linux 8 (64-bit)
Version: 3.4.20-211 (Recommended)
Filename: kmod-hpsa-3.4.20-211.rhel8u4.x86_64.compsig; kmod-hpsa-3.4.20-211.rhel8u4.x86_64.rpm; kmod-hpsa-3.4.20-211.rhel8u5.x86_64.compsig; kmod-hpsa-3.4.20-211.rhel8u5.x86_64.rpm

**Enhancements**

Added RHEL8.5 support

**Software - Lights-Out Management**
HPE Lights-Out Online Configuration Utility for Linux (AMD64/EM64T)
Version: 5.6.0-0 (Optional)
Filename: hponcfg-5.6.0-0.x86_64.compsig; hponcfg-5.6.0-0.x86_64.rpm

**Prerequisites**

This utility requires the following minimum firmware revisions:

- Integrated Lights-Out 3 firmware v1.00 or later
- Integrated Lights-Out 4 firmware v1.00 or later
- Integrated Lights-Out 5 firmware v1.20 or later

The management interface driver and management agents must be installed on the server.

For iLO 5, openssl v1.0.x or later is required in addition to above packages. Customers who manually compile and install openssl or intentionally relocate /usr/bin/openssl, need to set PATH environment variable to direct HPONCFG to the right/intended openssl.

**Fixes**
Fixed an issue where HPONCFG was not able to detect openssl library when multiple 64-bit openssl installed.

**Enhancements**

Updated product name to HPE Lights-Out Online Configuration Utility for Linux (AMD64/EM64T).

---

**Software - System Management**

HPE ProLiant Agentless Management Service for Red Hat Enterprise Linux 8 Server
Version: 2.10.4 *(Optional)*
Filename: hp-ams-2.10.4-885.5.rhel8.x86_64.compsig; hp-ams-2.10.4-885.5.rhel8.x86_64.rpm

**Prerequisites**

- hp-ams supported on HPE ProLiant Gen8 and Gen9 Servers.
- hp-ams provides information to the HPE iLO 4 service providing SNMP support.
- SNMP PASS-THRU on the HPE iLO 4 MUST be disabled, and SNMP should be configured on the HPE iLO 4. The HPE iLO 4 may need to be reset after changing these settings.
- **Requirements:**
  - Minimum HPE iLO 4 Firmware Version = 1.05
  - Minimum supported OS Versions = Red Hat Enterprise Linux 5.6, Red Hat Enterprise Linux 6.0, SuSE Linux Enterprise Server 10 SP4, SuSE Linux Enterprise Server 11 SP1

**Fixes**

Fixed the following items:

- Drive status all shows failed on SL4540 Gen8 H220 [LSI] ILO4 due to incorrect SCSI command tags.
- Addressed issue where hp-ams may fail to start when U.3 NVMe devices are installed in the system
- The HPE Synergy 6810C 25/50Gb Ethernet Adapter not displaying information in hp-ams is now resolved

---

**HPE SNMP Agents for Red Hat Enterprise Linux 8 Server**

Version: 10.9.4 *(Optional)*
Filename: hp-snmp-agents-10.94-689.8.rhel8.x86_64.compsig; hp-snmp-agents-10.94-689.8.rhel8.x86_64.rpm

**Prerequisites**

The hp-health and hp-snmp-agents run as 32 bit applications in the x86_64 environment. The Linux kernel 32 bit compatibility must be enabled (usual default for Linux) and the 32 bit compatibility libraries must be present.
To get the list of all dependency files for hp-snmp-agents type:

```
rpm –qp --requires hp-snmp-agents-<version>.rpm
```

**Fixes**

Fixed the following items:

- The hp-snmp-agent may show "NAME="SLES" as OS description for all the SLES15 and subversion.
- The user may see the incorrect status for the connected NIC ports due to missing the ifconfig system command in SLES15 and subversion.
- The user may see interface information is missing on the SMH page due to the hp-snmp-agent for SLE 15 missing the systemd rpm during the package build.

**Precautions for the user on Linux OS:**
Do not provide login access to the “hpsmh” user (created during installation) by editing the /etc/passwd file or any other means
Do not add any user to the “hpsmh” group (created during installation)

Prerequisites

Before installing the SMH software, the RPM verifies that the required versions of Linux library dependencies are present. If any dependencies are not present, then a list of the missing dependencies is provided. The user must manually install all missing dependencies to satisfy the prerequisites before proceeding with the RPM installation.

Fixes

- Updated jQuery to version 3.6.0 (CVE-2020-11022 & CVE-2020-11023)

HPE System Management Homepage Templates for Linux
Version: 10.8.1 (Optional)
Filename: hp-smh-templates-10.8.1-1487.3.noarch.rpm

Prerequisites

The hp-smh-templates RPM install will fail, if all dependencies are not installed. The administrator can verify the list of dependencies required by running this command. If the repositories being used by yum or zypper, includes these dependencies, the installation tool will automatically retrieve them. However if they are not present, the user must manually install them prior to proceeding with the RPM install.

To get the list of all dependency files for hp-smh-templates type:

```
rpm --qp --requires hp-smh-templates-<version>.rpm
```

Fixes

Initial support for Red Hat Enterprise Linux 8 Server

Content Notes

**RHEL8.5 Supplement for Gen9 SPP Contents**

This table lists all of the software and firmware on this RHEL8.5 Supplement for Gen9 SPP.
